PROJECTS

Smart Shopping Basket Using RFID

- The purpose of this project is to provide a handsfree and hassle-free shopping experience to the user in the supermarket who suffers from the problems such as having chaotic time moving the baskets.

- The project follows the user as per the command given in the smartphone application provided along with the smart shopping basket and installed on his phone.
- While browsing the products , whenever user puts each product into the basket is read using RFID technology, where each data is sent to the supermarket's server for a total billing of items the user wishes to buy.
- Then, the net amount is displayed on the LCD placed to basket .

Django Blog Project

- The purpose of this project is create our own Blog on various intrested topics of me. Where on each topic we can read through and comment below it. Most commented topic is also mentioned in this project.

Function Based Views Project | Django Mini Project

- The purpose of this mini project is to create a table of employee details where we can insert, update and delete the employee details.
